FREE Training
Thursday, April 13
6:30-8:30 pm

The Layperson Naloxone (NARCAN) training will teach you how to recognize the signs of an opioid overdose and how to administer the opioid overdose reversal drug Naloxone.

In this free in-person training, you will learn about the effects of the opioid public health crisis in the U.S., and our community, how to recognize and prevent an opioid overdose, and how to administer naloxone.

The Layperson Naloxone (NARCAN) training course is suitable for laypersons, including, but not limited to businesses, organizations, community members, correctional facilities, educators, faith groups, government and health care professionals, parents and caregivers, pharmacies, school nurses, senior living facilities, sober living communities, treatment and recovery centers, and more.

TOPICS INCLUDE

- Ability to recognize the signs of an opioid overdose.
- Acquire knowledge of how to administer the opioid overdose reversal drug Naloxone.
- Understand the role of harm reduction in the overall opioid public health crisis solutions / action plan / strategy.

Naloxone (Narcan™) is an opiate antidote which reverses an opioid overdose in much the same manner as an EpiPen reverses an allergic reaction. Opioids include fentanyl, heroin and prescription pain pills like OxyContin, Percocet, methadone, and Vicodin. When a person is experiencing and overdose from an opioid, their central nervous and respiratory systems are depressed and breathing slows and can stop. Naloxone blocks the effects of opioids therefore reversing the effects of an overdose.
